Course Objectives:		his is a 4 credit course that runs weeks from march 2021 to may 2021. It consists of both didactic large group lectures and laboratory sessions. The course is intended to provide an introduction to human anatomy for first year nursing students. The structure and organization of the course are based on a systemic approach to the study of the body. Thus, basic concepts and essential details will be presented in a systemic manner. The functional aspects of human anatomy will be integrated with structure, and the clinical importance of anatomical relationships will be introduced where appropriate. Understanding and remembering anatomy is greatly facilitated by visual learning. Accordingly, laboratory periods are an important and regularly scheduled part of the course. They provide an opportunity to view body structures and their relationships. These exercises reinforce the lecture material and open up a different dimension of learning. During the laboratory sessions, students will view models relating to the structures discussed in the lectures. Even though no dissection is involved, students must wear proper attire in the gross anatomy laboratory (requirements will be outlined in the Introductory lecture). The textbook should be used as a learning resource.				
Course Description (Course overview):		Human Anatomy is a single comprehensive course with various branches such as: – Gross Anatomy, Developmental Anatomy (Embryology), Cytology, Histology, Histochemistry, Genetics, Neuroanatomy etc.
